Amendments to the Claims

1-3. (Cancelled)

4. (Original) A method for extending a subscribing community and providing user services using a Personal Address Book, said method comprising the steps of:

establishing a first Personal Address Book, said first Personal Address Book containing a plurality of entries, each of said entries having associated connection information and an associated user;

marking selected ones of said plurality of entries;

sending an invitation to said associated users of said entries marked in said marking step by utilizing said connection information in said entries marked in said marking step; and

receiving acceptances from the associated user of selected ones of said entries marked in said marking step and, in response to receiving each of said acceptances, creating a second Personal Address Book.

5. (Original) The method of claim 4, further comprising:

receiving a voice message from a user, said voice message requesting a connection to a destination number;

determining the content of said voice message;

retrieving said connection information from said first Personal Address Book based upon said content of said voice message, wherein said connection information is sufficient to establish a communicative connection between said user and said destination number; and

making said connection between said user and said destination number using said connection information.

6. (Original) The method of claim 4 wherein said step of establishing said Personal Address Book includes creating a new Personal Address Book.

M

- 7. (Original) The method of claim 6, further comprising the step of filling said entries of said Personal Address Book with information.
- 8. (Original) The method of claim 6, further comprising the step of creating a linkage to a plurality of services, wherein said services include e-mail.

9-11. (Cancelled)

12. (Original) A service node in a telecommunications network comprising:

access means for accessing a Personal Address Book, said Personal Address Book
containing a plurality of callers;

selection means, coupled to said access means, for selecting callers in said Personal Address Book as invited callers;

contact means, coupled to said selection means, for contacting said invited callers and asking said selected callers to join a subscribing community;

reception means for receiving an answer from said invited callers; and

 \mathcal{U}^{1}

creation means, coupled to said reception means, for creating a plurality of second Personal Address Books in response to receiving said answer from said invited callers.

13-14. (Cancelled)

15. (Original) A computer program at a service node comprising:

first code for accessing a Personal Address Book, said Personal Address Book containing a plurality of callers;

second code for selecting callers in said Personal Address Book as invited callers;

third code for contacting said invited callers and asking said selected callers to join a subscribing community;

fourth code for receiving an answer from said invited callers; and

fifth code for creating a plurality of second Personal Address Books in response to receiving said answer from said invited callers.

16. (Cancelled)
